Zeutra Consulting

Data Migration Services

A Complete Migration Solution

At Zeutra, we utilise a robust end-to-end migration methodology assisted by an integrated toolset to ensure we reduce complexity and provide early, tangible benefits to our clients. Our consultants, having direct experience of numerous large-scale global SAP and Dynamics AX implementations, are versed in best practice migration strategies to help you avoid the pitfalls often found in data migration projects. With Zeutra, you get a client-focussed approach from individuals who know data and understand the real-life problems that managing data within an organisation can bring.
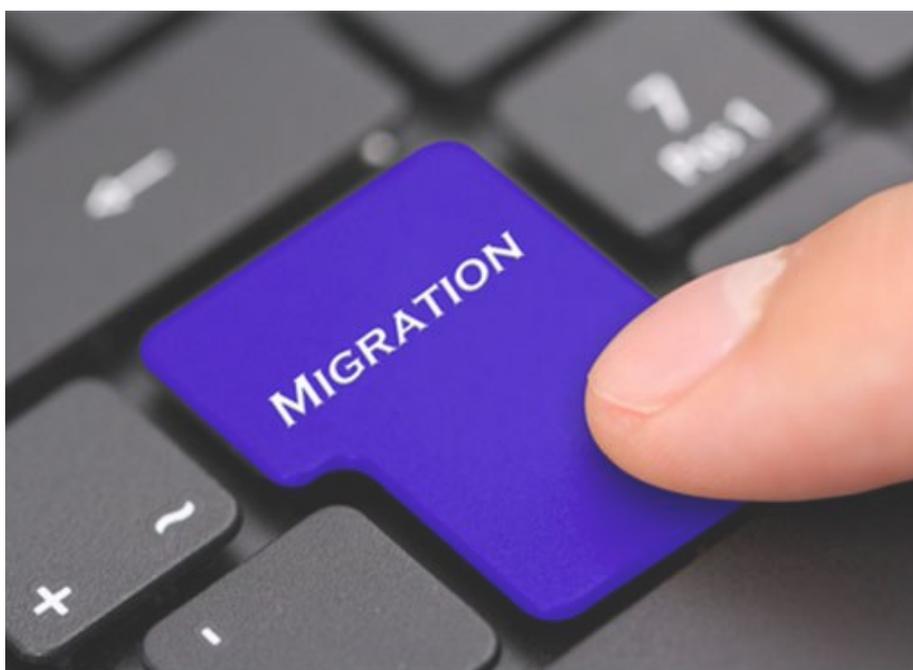

Our services extend through the whole lifecycle of the migration, including initial data discovery, profiling and data quality, through to data cleansing, target system mapping, data transformation, validation and loading of data. Our iterative approach ensures you migrate the best quality of data available and that your go-live will hold no surprises!

"Zeutra are experienced and engaged professionals who will go the extra mile to deliver, not only on time and within budget, but also with quality!"
- Dennis Van Bregt,
Director MDM EMEA,
Univar 2010-2013

"Zeutra understand data quickly and using their toolset are quickly able to build out a robust staged approach to data migration. I definitely want to work with these guys again !"
- Gary Eaves,
ERP Program Director,
Dentsu-Aegis Network 2013-2015

The benefits...

- Profiling and data quality reporting.

- Automated direct access to many legacy database systems.

- Integrated target system mapping.

- Iterative, non-invasive approach with target system pre-validations.

- Best practice migration strategies.

Founded in 2011, Zeutra Consulting is a specialised data consultancy, focusing on large scale ERP deployments, data migration, data integration, data quality & profiling and data governance projects.

Zeutra has migrated data on Pan-European and Global ERP programmes working across business areas including HR, Payroll, OTC, PTP, RTR, and MM.
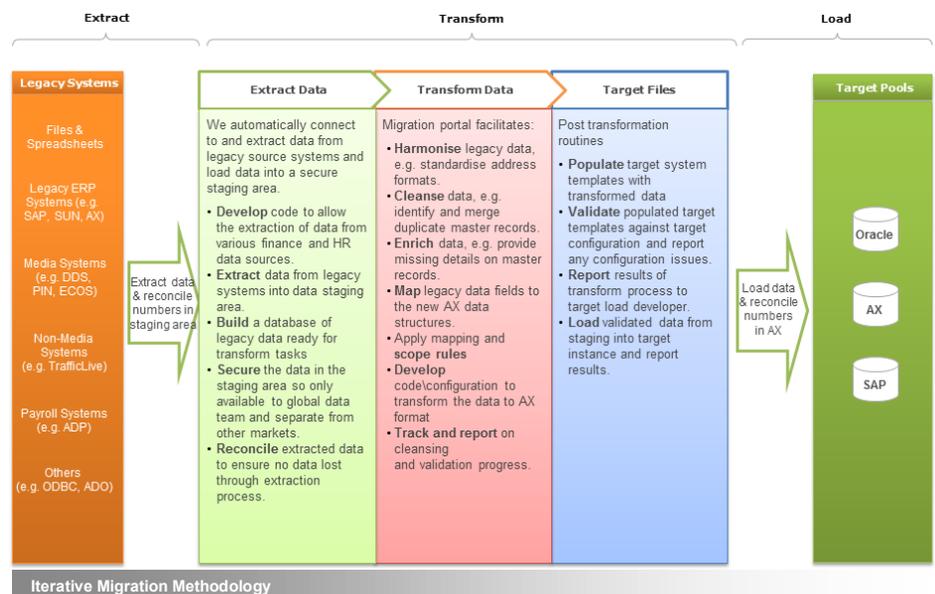

Our Migration Methodology

At Zeutra we understand the importance of not only providing a technical solution for data migration but we also ensure that business stakeholders appreciate the data migration life cycle. We aim to guide all stakeholders on the data migration journey by following a proven structure project methodology to ensure clarity, quality and accuracy at all stages of the project.

Our methodology can be adapted and aligned to wider ERP programme methodologies to ensure consistent delivery.

| S1 - Discover	S2 - Map	S3 - Build	S4 - Prepare	S5 – Go Live	S6 - Operate
Legacy Data Landscaping & Discovery Phase	Confirm target structures & map legacy data	Configure solution & write custom code	Iteratively test the build & fix	Load and Transition the Data	Post implementation support

Each stage has clear deliverables and is supported by our migration toolset to ensure we remain on track. At Zeutra we take the unknown out of data migration and support the wider programme work-streams to ensure success.

Iterative Migration Methodology

Our data migration approach is iterative in nature and gives you early visibility of data quality issues so that you have the maximum chance of resolving these ahead of your go-live. This approach also allows you to gather metrics around data quality improvement through each phase of the load cycle.

Our software and methodology combine to facilitate configurable numbers of loads prior to system go-live, which provides multiple opportunities for feedback and fine tuning while data cleanse and even project template configuration are moving. This allows us to give measurable feedback on data quality and suitability against the latest ERP target system configuration.

Migration Portal Technology

Migration Toolset

Our toolset consists of a robust set of the latest industry-proven technologies, including Microsoft SQL Server, Microsoft Data Quality Services and Microsoft Master Data Services, integrated via our own proprietary software. With this suite of tools we are capable of facilitating data cleansing, harmonisation, governance and migration either in bespoke units or as part of a complete data migration/quality project.

Automated data extraction, profiling & quality checks

Our proprietary software can connect securely to all major databases and file formats and facilitates pain-free extraction of data from source systems. Data extracts can also be scheduled to run at specific times and frequencies without the need for human interaction. Secure storage and access to this data is then handled by the tool-set.

Automatic profiling of data along with configurable data quality checks are also available at point of extraction, providing a wealth of information on the quality and cleanliness of your source data.

Non-invasive data-readiness checks

Data-readiness checks prior to consumption by target load programs are also available as standard. These checks ensure data adheres to standard formatting rules as well as to target system configuration. Additional data readiness checks can be configured.

All of these validation steps ensure that your data is clean and "load-ready", reducing delays in the overall load process, and providing agile feedback on the quality of your load data.

Our Team

Zeutra Consulting is a specialised data consultancy, formed from a team of IT professionals with over 50 years combined proven experience across a wide variety of industry sectors, such as Formula 1, Retail, Media, Manufacturing, Distribution and Software Development.

Each of our consultants has extensive experience in the areas of data migration, migration project management, data analysis, data integration, database design, data quality and governance, gained over many years in industry.
